

Brian Merriman

Senior Frontend Engineer — Complex Data Applications

New York, NY · b@merriman.xyz
merriman.xyz · github.com/merriman-xyz

Senior frontend engineer building high-performance JavaScript interfaces for complex data. At JPMorgan Chase, built the frontend of a multi-grid analytics workspace over 100M+ row datasets. Promoted to Vice President in two years. Now shipping local-first products with production sync, subscriptions, and automated tests that gate every release. Seeking a full-time senior frontend role.

EXPERIENCE

Tanji Systems · Independent Product Engineer New York · Jun 2026 – Present

- Shipped Ingrid, a local-first hierarchical grid workspace for structured notes and projects, with IndexedDB persistence and paid cloud sync in production.
- Built Showdown Elo, a nightly MLB ratings product derived from 8M+ Statcast pitches; benchmarked the underlying models against betting markets and published the negative result.
- Designed and shipped both products end to end — product direction, data modeling, interface, deployment, automated validation — with AI coding agents assisting implementation.

JPMorgan Chase · Lead Software Engineer (Vice President) New York · Feb 2025 – May 2026

JPMorgan Chase · Software Engineer III (Associate) Jan 2023 – Jan 2025

- Served as primary frontend engineer during the product’s first year, building a multi-grid analytics workspace on a small, fast-moving team.
- Enabled users to explore, join, pivot, and retrieve datasets containing 100M+ rows.
- Kept every grid responsive over server-held data: virtualized scrolling fetches only the visible row window over WebSockets, backed by client-side caching and state management.
- Evaluated LLM workflows for legacy modernization and codified reusable project instructions, skills, and widget constraints for generated UI.

OKG Tech · Software Engineer New York · Mar 2022 – Dec 2022

- Shipped an updated bus-ticketing system using React and Node.js as the primary implementation engineer on a four-person team.
- Developed scheduling, vaccination, appointment-reminder, and clinical workflow features integrated with eClinicalWorks and existing operational systems.

Yunshang Tea · Co-Founder Zhejiang, China · Sep 2015 – Nov 2021

- Operated a specialty tea business serving retail and wholesale customers.
- Built internal database workflows for inventory, sales, and operations.

SKILLS

Languages	JavaScript (ES6+), SQL, HTML, CSS
Frontend	React, vanilla JavaScript, virtualized rendering, frontend performance, state management, WebSockets, IndexedDB, Dexie, local-first sync
Backend & Tools	Node.js, SQLite, REST API integration, Git, automated testing

EDUCATION

Manhattan College · Bachelor of Arts in Computer Science Bronx, NY · 2011

- Magna cum laude · Phi Beta Kappa
